

The NetProfit® System Causes Internet Connectivity And Speed Complaints to Drop an Astounding 95%

A large Fraternity House experienced many frustrated Internet users who were trying to complete daily homework and other recreational Internet tasks. The property owner sought to improve their residents Internet experience. This Fraternity House required a real-time, right-now solution for their ResNet issues.

BEFORE THE NETPROFIT® SYSTEM:

- Bandwidth was being hogged by a few residents preventing others access
- No control over access/passwords
- No way to monitor usage and determine who was using all the bandwidth

AFTER THE NETPROFIT® SYSTEM:

- Now able to limit high volume users allowing low volume users 24/7 access
- Now able to control the number of passes issued per allocated bandwidth
- Now able to monitor total usage and individual bandwidth usage

“The NetProfit equipment was easy to install and with minimal training and the remote viewing of bandwidth usage is also easy.” said the IT Project Manager who installed and actively monitors this fraternity house.

THANKS TO THE NETPROFIT® SYSTEM THIS FRATERNITY HOUSE HAS:

- Increased revenues by offering tiered service plans
- Reduced help desk service calls for residents, and costs to property owner
- Eliminated every “bandwidth hog” who consumed all available bandwidth
- Added value by enabling quota and caps, fair Internet for every resident

Bandwidth where you want it, when you want it!

The Mesh Networks | 855.855.MESH | info@themeshnetworks.com | www.themeshnetworks.com

Many IT departments and property managers spend a disproportionate amount of time dealing with student ResNet issues, reduce ResNet issues with the NetProfit® System
